INTRODUCTION

This report presents traffic accident data for 1963, 1964 and 1965 on the rural sections of Montana's Primary and Interstate Highway Systems. It is based on all accidents occurring on these systems that were reported to the Highway Patrol during the three-year period.

Montana statutes require that accidents must be reported to the Montana Highway Patrol if 100 dollars or more of property damage is involved or if they are the cause of an injury or death. Penalties are provided in the law for not reporting these accidents within a reasonable length of time.

The fatality rate per hundred million vehicle-miles of travel, as well as the total accident rate per million vehicle-miles of travel, have been computed for each year of the three-year period, 1963-1965. Property damage losses have been obtained from the estimates shown on the accident reports. Total economic loss has been computed by adding the National Safety Council's estimate of costs of deaths and injuries to the reported property damage. This National estimate of economic loss for 1965 was \$1,800 for each injury and \$34,400 for each death on our highways.

The first section of the report lists pertinent accident data by Highway Patrol section on each Federal Aid Route. The second section of the report lists each Highway Patrol section in descending order by accident rate per million vehicle-miles of travel. An accident summary of each Federal Aid Route as well as a summary by County are listed in the back of the report.

The tabulation on the following page is a Statewide summary of each item listed in the report.

ITEM	STATEWIDE SUMMARY		
	1963	1964	1965
Section Length in miles and tenths (Rural constructed mileage - Primary and Interstate Systems)	5,762.6	5,778.5	5,771.8
Average Daily Traffic Volume	883	899	948
Number of Property Damage Accidents	3,142	3,348	2,896
Number of Injury Accidents	1,332	1,332	1,703
Number of Fatal Accidents	138	141	143
Total Number of Accidents	4,612	4,821	4,742
Number of Persons Injured	2,123	2,135	2,947
Number of Persons Killed	170	175	178
Amount of property damage as reported to Highway Patrol	\$3,291,958	\$3,906,819	\$4,337,400
Total economic loss based on the National Safety Council's estimate of the cost of deaths and injuries added to the reported property damage.	\$12,986,658	\$13,895,819	\$15,765,200
Accident rate - expressed as the total number of accidents of all types per million vehicle- miles of travel.	2.5	2.5	2.4
Fatality rate - expressed as the total number of deaths per hundred million vehicle-miles of travel.	9.2	9.2	8.9

The State map on Plate 1 shows the location of all sections of highway having an accident rate above the State average of 2.4 in 1965. About 221.7 miles of highway shown in red have an accident rate of more than double the State average. Sections shown in green, totaling 2,345.7 miles, have an accident rate of from 2.5 to 5.0. Sections at or below the State average of 2.4 accidents per million vehicle-miles of travel total 3,204.4 miles and are shown on the map by means of an open band.

The following tabulation compares the accident and fatality rates on the Interstate and Primary Systems for 1965.

	<u>Miles</u>	<u>Ave. Daily Traffic</u>	<u>Number of Accidents</u>	<u>Number of Fatalities</u>	<u>Accident Rate</u>	<u>Fatality Rate</u>
Interstate System	1,190.0	1,741	1,626	75	2.2	9.9
Primary System	4,581.8	730	3,116	103	2.6	8.4
TOTAL	5,771.8	948	4,742	178	2.4	8.9

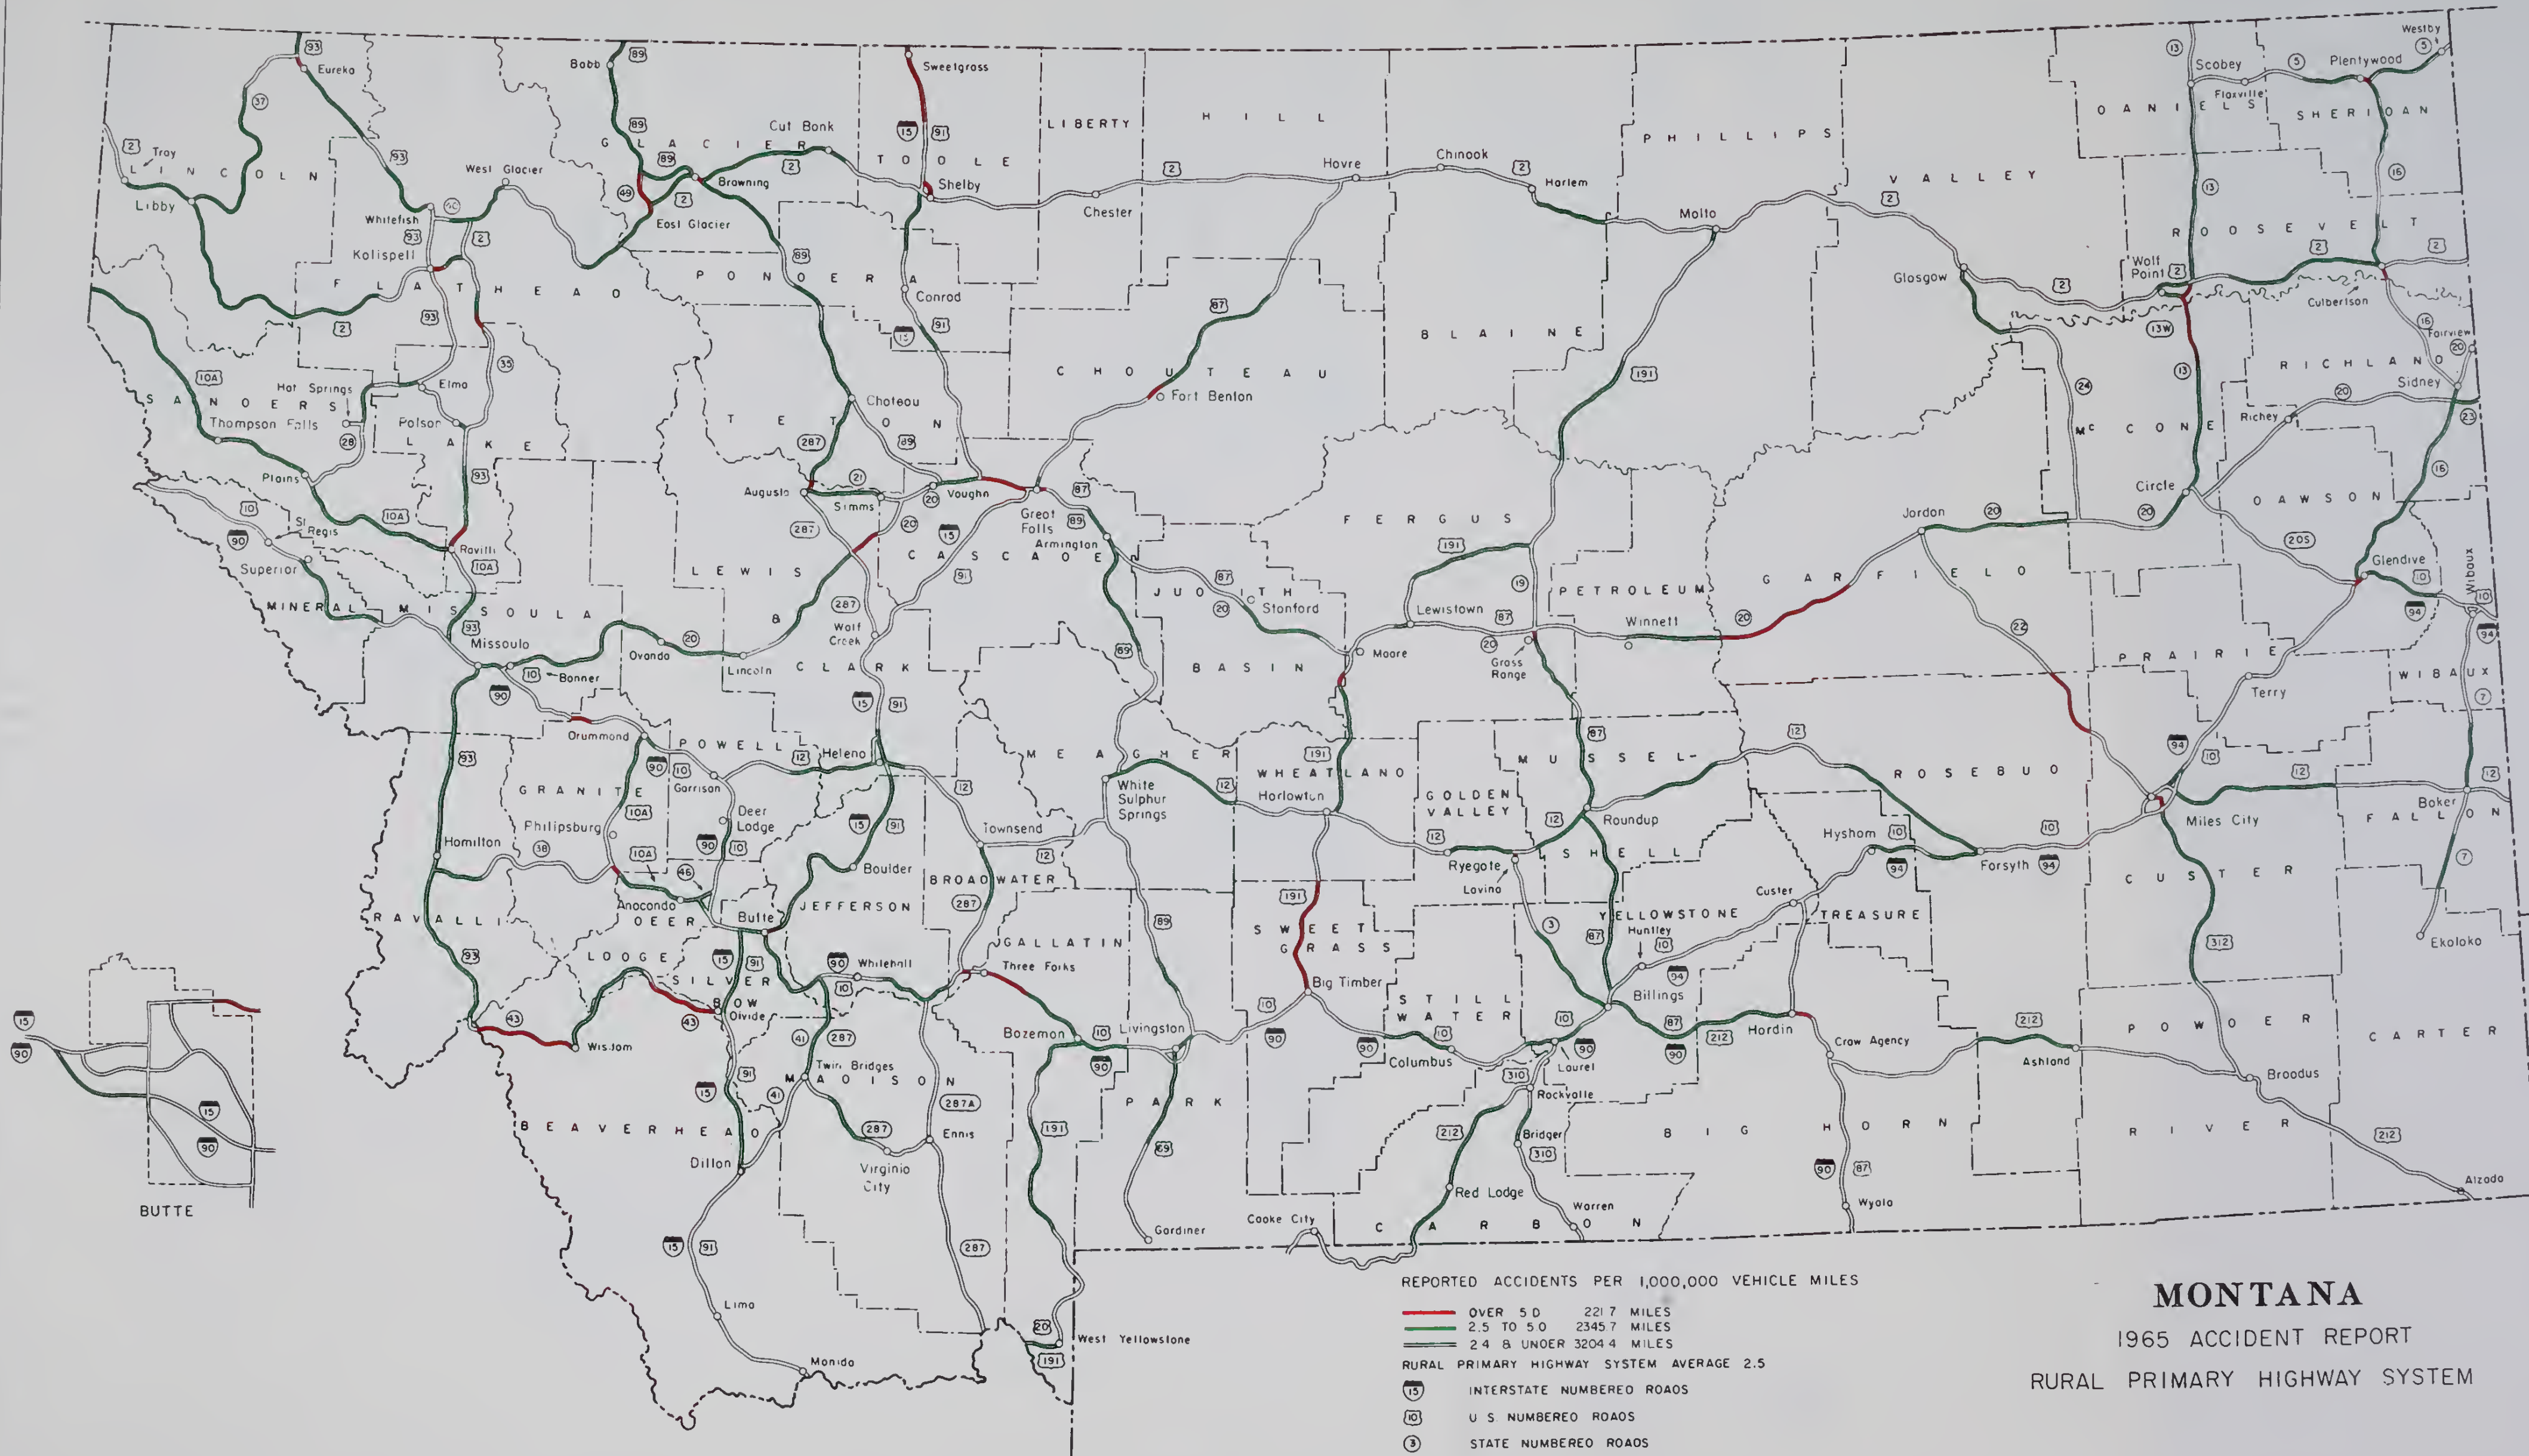

SIGNIFICANCE OF ACCIDENT RATES

Accident data for 1965 was analyzed for accident rate significance. The analysis was made utilizing an adaptation of statistical quality control methods.

Using this procedure, limits may be established for accident rate variation caused by chance. Once these limits are obtained, an accident rate falling above or below them may be considered to have causes other than chance and thus be significant.

It must be understood that this method produces only an indicator of significance and final determination of significance may only be made after detailed investigation and analysis of each situation. Sections having significantly low rates (indicating favorable events) are of value in aiding accident reduction in critical areas.

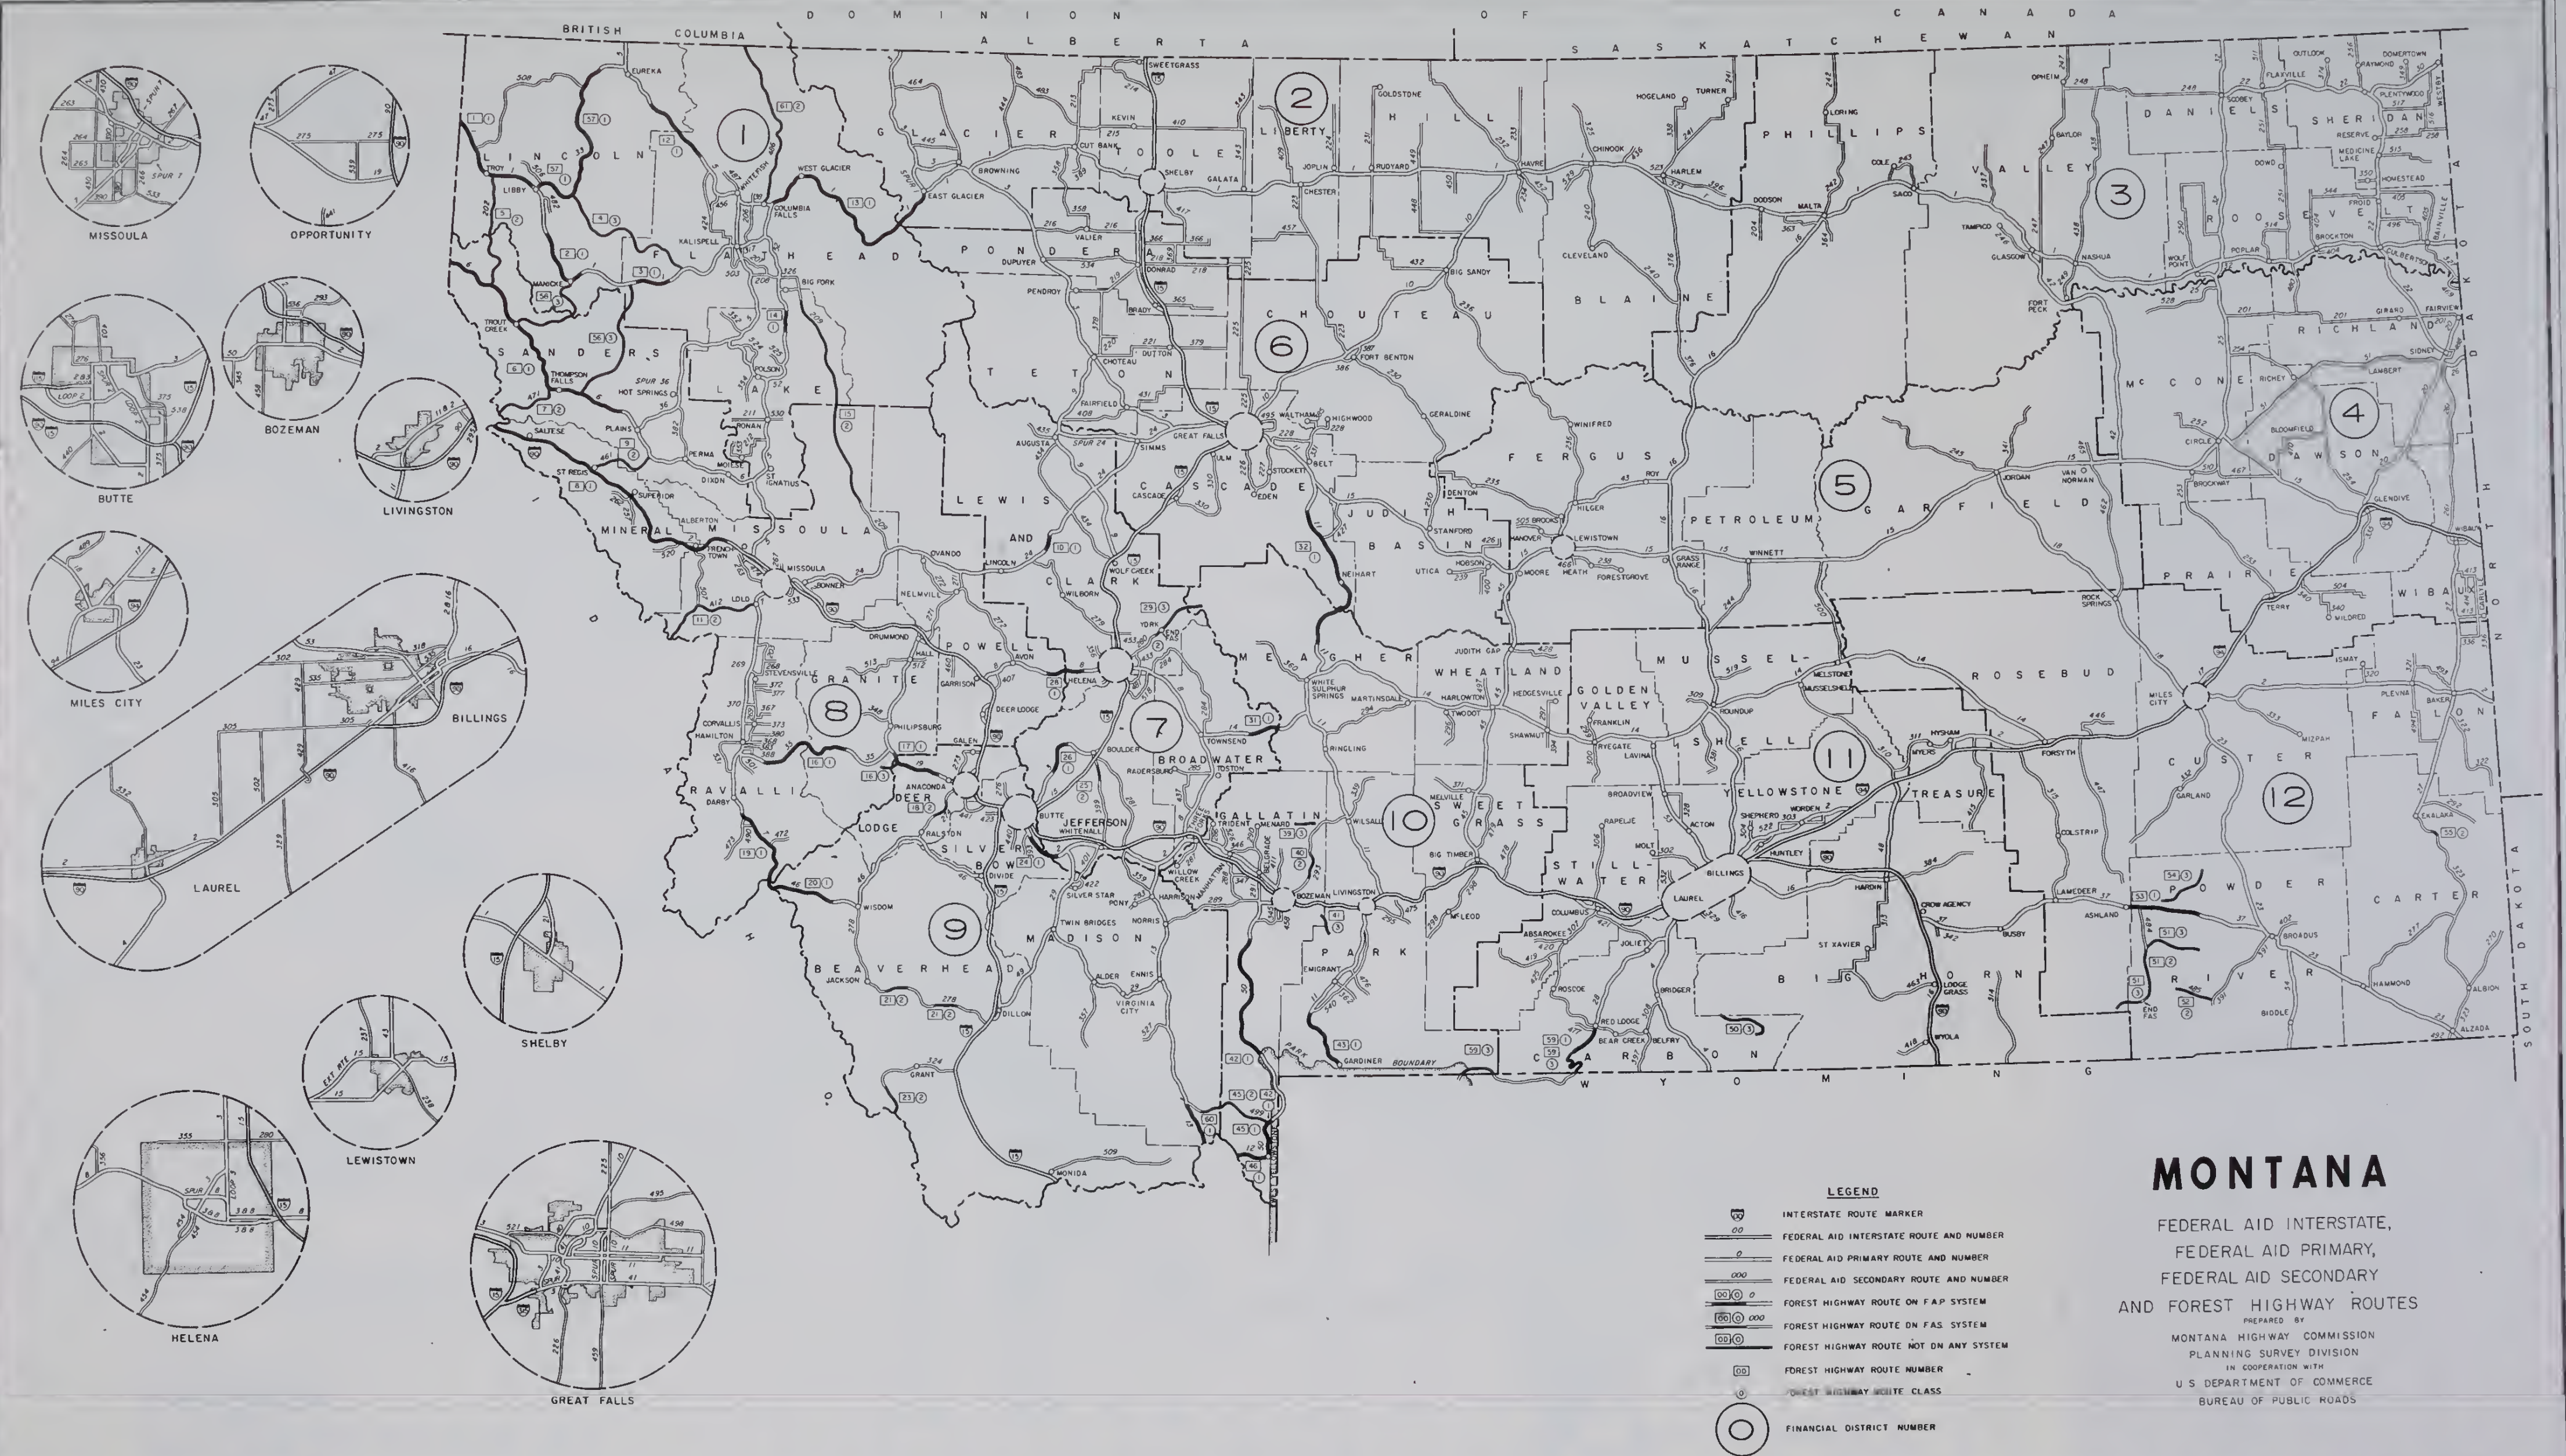

An asterisk has been placed by the accident rate for any section having a rate which is higher or lower than the limits established.
